This is a really good question! While this is not our day job, it's something we are very interested in. There are many different waves that are useful for many different purposes. One of the most popular waves that you might be interested in is the Scheps 73 wave, which is often used for synthesizing basses or drums. The problem with these types of waves is that they have to be available somewhere online to download, which can be difficult if you don't know where to look. If you have a physical copy of the wave then you could always try to locate it that way, but that is often difficult. This will help explain everything that you need to know about waves in order to get the Scheps 73 wave that you want. However, if this doesn't work out for you then I guess you can always look at all of your options. If anyone is interested in the format of the files, they are .ogg files and usually come in around 1 MB for each individual one. It's important to make sure that if they are compressed in any weird way (like .rar or something similar), they are uncompressed before using them because it won't work otherwise. If you're trying to find the Scheps 73 wave because you're working on a music project, then you should know that this is actually one of the most popular waves out there. People use it for tons of different things, especially in the genres of rock, industrial rock and even punk rock. These are all genres where it is hard to find free samples online. It's also useful when you want to create percussion sounds that are very realistic or something that humans can actually relate to. The reason that this wave is so good for these purposes is simply because it has a lot of character and many different instruments mixed into it. There's bass, piano, drums and many other instruments all layered up into one good track. This is awesome! So many people are looking for this because it's very hard to find online. That's the problem with most waves because not too many people are comfortable enough to give them away for free. Many of them are very protective over their samples, which is understandable. Now, if you're someone who doesn't know where to go looking for it, then you should go online and start asking around on forums or message boards. You could even try asking some of your friends or maybe even your teachers, but let's be honest - they probably don't have the time to look for one either because they have so much on their plate already. Another thing that you can do is try searching Google for "Free Scheps 73 Wave". If you have the version of Chrome, you'll find the search will bring up a bunch of results for almost all of them. However, there are some that don't give it away for free, but if they are in the right format then they might work. There are many different formats out there, but one of the most common ones is .wav. As said before, it needs to be uncompressed before using it because if it's compressed in any other way then it won't work properly. The wave itself has really good statistics which is something that people enjoy.
